

Radial fan for high concentrations of dust-laden air.

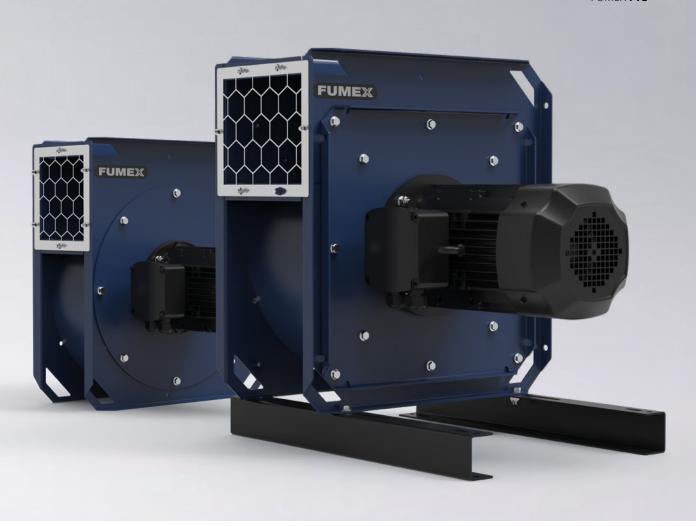

Radial fan for high concentrations of dust-laden air

FUMEX FTE is a range of radial fans for use at high concentrations of dust-laden air. Fan housings and impellers are made from heavy-duty steel sheet for industrial use. The welded impeller has straight blades allowing it to handle large amounts of dust with less risk of imbalance that could cause bearing damage. The direction of the outlet is easily changed by turning the fan housing. The fans are optimised for use together with the Fumex product range for fume extraction and control units in industrial environments.

More wide design for handling of larger particles

High-quality sturdy design

Fumex's new fan range maintains the brand's high quality with a modern, practical and robust design that is easy to assemble. The standard delivery version is in exhaust direction LG 90, but both the LG and RD versions can be adapted on installation to the customer's needs (0/90/180/270).

The welded impeller makes the FTE particularly sturdy, which, along with its overall robust design, ensures a long service life.

At high dust concentrations

Compared to many other similar models on the market, FUMEX FTE has more space between the blades, providing a more wide design capable of handling larger particles and high concentrations of dust-laden air. This makes the FTE range the right choice for workplaces that, for various reasons, are unable to install filter units in the extraction system.

With five models and airflows up to 6600 m³/h (1830 l/s), Fumex has a wide range to offer. The fan is not designed for potentially explosive or corrosive environments. All models are tested at third-party test bodies.

The FTE range has numerous accessories to make installation easier and deliver greater efficiency in use.

Accessories

Flexible Duct FDSFor connection to the inlet side, including 2 mounting clamps.

Mounting Rail FBEKFor easy and safe installation.
(FBEK 650 included as standard on FTE 400/750).

Transition FTOTransition on outlet side to round connection.

Safety Switch SSB/SSB EMC With lockable toggle. Two M25 bushings included. SSB EMC is copper-sheathed.

Contactor SKO3-pin contactor with overcurrent relay for manual reset. The overcurrent relay has phase loss protection. Used together with external switches or control.

Motor Protection Switch SMB 3-pin motor protection switch with thermal magnetic release equipped with phase fault protection. Designed for operating and protecting fan motors.

Vibration Damper Kit FBV M10

Kit with four vibration dampers in natural rubber with hardness 60° IRH.

The right version for the right accessories

When ordering accessories for your FUMEX fan, it is important that you specify your fan model at the time of order. Talk to your dealer or directly with Fumex sales staff to ensure the best service.

To meet the requirements of the CE standard, the fan must be equipped with safety switches and overcurrent protection. For speed control, see the separate product sheet for control units.

Specifications

Delivery version

The fan is delivered as standard in version LG 90. Can be adapted on installation to the customer's needs in both the LG and RD versions.

LG 90

LG 180

LG 270

Standardised delivery version

Surface finish

Sheet metal parts: Stainless steel, powder-coated

or electro-galvanised.

Production

The FTE range of fans is manufactured in accordance with the following directives and standards:

- Machinery Directive 2006/42/EC
- EMC Directive 2014/30/EU
- EN ISO 12100:2010
- EN 60204-1
